Subject: Dugout G-30
CC: OGMCOAL

Vicky,

Priscilla has had a chance to review the G-30 response and we'll be getting a conditional approval letter off to you today (via e-mail at the very least).

A couple of things: the conditional approval letter will state that based upon the submitted soil data, the top 8" of surface soil should be salvaged as topsoil. The second thing is (and we can handle this with the clean-copy submission), Priscilla would like you to strike the 3rd paragraph from page 2-9. It's the paragraph that discusses how "Prior to initiating the construction...Permittee will submit soil samples. . .at a minimum two weeks prior" etc. Please delete this paragraph prior to submitting the clean-copies.

In the future, please submit the baseline soil information with the initial submittal. We have this deficiency every time. In order for Priscilla to do her review, she needs the baseline soil information. If she doesn't have it, it's an automatic deficiency. Life would be simplified for everyone if we didn't have to deal with this issue over and over again.

Give me a call and we can discuss it.

Thanks,
Steve
